We are currently looking for volunteers for our **Migraine, Nexplanon & Back Spasms** studies. Please contact us at 505-224-2735 if you are interested.

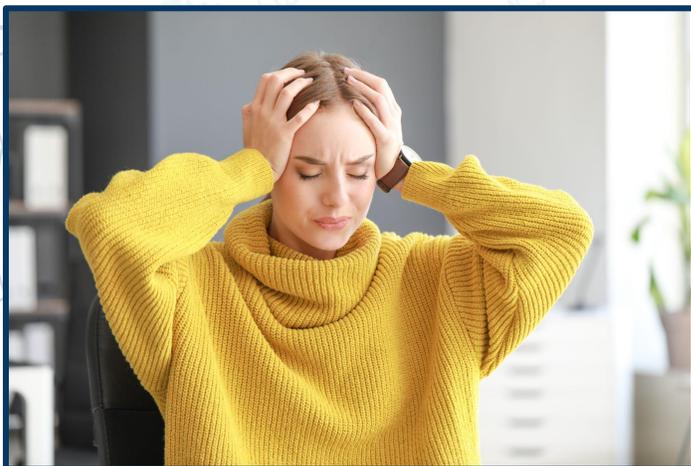

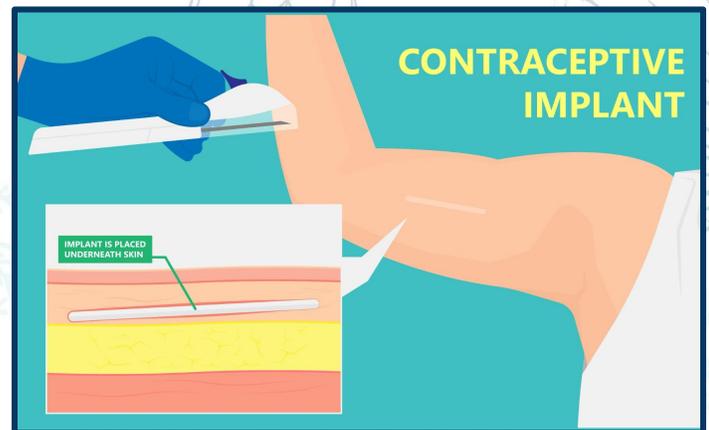

Back Spasms

is a sudden tightness and pain in your back muscles. It may happen from overuse or an injury. Things like sleeping in an awkward way, bending, lifting, standing, or sitting can sometimes cause a spasm.

Nexplanon

Nexplanon is a soft, flexible birth control for insertion under the skin. The implant contains Etonogestrel, which is the synthetic form of progesterone. It works by tricking the body into thinking ovulation has already occurred. It is effective 8 hours after insertion and lasts at least three years. Data has shown effectiveness can last up to five years and after removal, fertility returns quickly.

Migraines

is a common type of headache that is characterized by an intense throbbing or pulsing in one area of the head and are commonly accompanied by nausea, vomiting, or extreme sensitivity to light and sound. For some sufferers, migraines are preceded or accompanied by auras, flashes of light or blind spots. Migraines typically last between four and 72 hours.
